

Total GHG emissions

429.5

metric tons of CO₂ equivalent (MT CO₂e)

Emissions by source

Emissions by source (MTCO₂e)

*The three rectangles in the bottom right corner of the chart represent paper, fleet, and water emissions.

Per-employee GHG emissions

1.9

MT CO₂e per full-time employee

Highlights

- Total GHG emissions in 2020 were 429.5 metric tons of carbon dioxide equivalent (MT CO₂e). This represents a decrease of almost 34% from 2019 emissions.
- Emissions per full-time employee (FTE) decreased from 2.8 to 1.9 MT CO₂e/FTE in 2020.
- The largest contributor to emissions was purchased electricity, which made up 40% of total emissions in 2020. This marks a change from 2019, when the largest share of emissions came from employee commutes.
- The second-largest source of emissions in 2020 was from employee commutes, which were responsible for 24% of emissions, followed by natural gas use (13%), waste disposal (9%), business travel (7%), and information technology (IT) purchases (5%). Paper purchases comprised 0.6% of total emissions in 2020, and less than 1% of total emissions came from water use and company fleet vehicle use combined.

Emissions by branch

This table gives emissions by branch. The bar charts break down branch emission sources, with the height of each bar chart corresponding to the total emissions at each branch.

Branch name	GHG emission source breakdown	MT CO ₂ e	% of total	MT CO ₂ e/FTE
Seattle		14.7	3%	2.2
Portland - Downtown		24.2	6%	0.8
Portland - MLK		44.9	11%	1.9
Portland - Rose City		20.9	5%	3.9
Portland - Pearl		45.3	11%	3.4
Portland - St Johns		12.9	3%	2.8
Sacramento		16.8	4%	1.1
Santa Rosa		4.7	1%	0.8
Oakland		39.5	9%	1.1
Fresno		51.0	12%	3.3
Visalia		9.1	2%	2.5
Porterville		86.7	20%	1.7
Bakersfield		15.2	4%	2.7
Los Angeles		39.3	9%	2.9
